DIGITAL MARKETING PROJECT 2

SEO Basics & Keyword Research

Industrial Training Kit | Decode Labs

Submitted by	Saurabh Singh
Course	BBA
Project focus	Keyword discovery, search intent, and content recommendations
Research example	A hypothetical digital marketing agency website
Batch	2026

1. Executive Summary

This project demonstrates a basic SEO workflow for a digital marketing agency website. The purpose is to identify phrases potential customers may search for, classify the intent behind those searches, and turn the findings into useful website pages and blog topics. The proposed strategy prioritizes clear service pages, educational content, local relevance, and long-tail queries that closely match a user's need.

The sample business is a hypothetical agency offering SEO, social media marketing, Google Ads, content marketing, and website optimization. No actual website analytics or live keyword-tool exports were provided, so search volume and competition are not presented as verified figures. The keyword priorities in this report are preliminary hypotheses to validate with Google Keyword Planner, Google Trends, Search Console, and live search-result analysis.

Project Objectives

- Find relevant keywords for a digital marketing agency.
- Identify informational, commercial, transactional, and local search intent.
- Group keywords into topic clusters and map them to suitable pages.
- Recommend content ideas and an initial publishing plan.
- Define practical on-page SEO and measurement actions.

2. Business and Target Audience

Business profile

Working example: a digital marketing agency serving small and medium-sized businesses, local service providers, start-ups, and growing online brands. Services include SEO, social media management, paid advertising, content creation, and website optimization.

Primary audience segments

Audience	Need or problem	Likely search behaviour
Small business owners	More enquiries, calls, and local visibility	“digital marketing agency for small business”, “local SEO services”
Start-ups	Brand awareness and cost-conscious customer acquisition	“digital marketing strategy for startups”, “SEO packages”
E-commerce businesses	More qualified traffic and online sales	“ecommerce SEO services”, “Google Ads agency”
Marketing managers	Specialist support and measurable performance	“SEO audit service”, “social media marketing agency”

Geographic assumption: the example may target India and selected cities. A real business should choose locations based on its actual service area and customers; do not add city pages for places the agency cannot genuinely serve.

3. Keyword Research Methodology

Step 1 — Seed keywords: begin with the services and customer problems the agency can solve, such as SEO, social media management, paid ads, and website traffic.

Step 2 — Expand the list: use autocomplete, related searches, customer questions, competitor service menus, and keyword tools to find natural variations and longer phrases.

Step 3 — Classify intent: determine whether the searcher wants to learn, compare providers, hire a service, or find a nearby business.

Step 4 — Evaluate fit: assess relevance to the agency, expected business value, ranking difficulty, geographic fit, and whether the website can provide a genuinely better answer.

Step 5 — Map each keyword: assign one primary topic to the most suitable page. Supporting terms can be included naturally when they address the same need.

Step 6 — Validate and improve: check actual search demand and SERPs before final prioritization. After publishing, review impressions, clicks, rankings, leads, and conversions.

Search intent categories

Intent	What the user wants	Example
Informational	Learn or solve a problem	“what is technical SEO”
Commercial investigation	Compare options before deciding	“best SEO agency for small business”

Transactional	Take action or purchase a service	“hire SEO expert”
Local	Find a provider in a place	“digital marketing agency in Lucknow”
Navigational	Reach a specific brand or website	A named agency or its login/contact page

How to validate keywords with tools

- Google Keyword Planner: review approximate search ranges and keyword variations; account access andcampaign settings can affect the data shown.
- Google Trends: compare relative interest over time and by region; it does not provide absolute search volume.
- Google Search: inspect the current results, page types, local pack, and questions shown for the query.
- Google Search Console: after the site is verified and has data, identify queries that already generate impressionsand clicks.
- Analytics or CRM: connect organic visits with enquiries, booked calls, and sales where tracking is configured.

Important limitation: all keyword examples and priority labels below are research hypotheses. This report does not claim exact monthly search volumes, keyword difficulty scores, or guaranteed Google rankings.

4. Keyword Research Table

The list below is a starting set for a hypothetical digital marketing agency. Priority is based on likely business relevance and intent, not verified search volume.

Keyword	Intent	Suggested page	Priority
digital marketing agency	Commercial	Main services / agency page	High
digital marketing agency for small business	Commercial	Small-business service page	High
SEO services	Transactional / commercial	SEO service page	High
SEO agency for small business	Commercial	SEO service page or supporting section	High
local SEO services	Transactional	Local SEO service page	High
social media marketing agency	Commercial	Social media service page	High
Google Ads management services	Transactional	Paid advertising service page	High
content marketing services	Commercial	Content marketing service page	Medium
website SEO audit	Transactional	SEO audit landing page	High
digital marketing agency in Lucknow	Local	Location page, only if genuinely served	Medium
digital marketing agency in Ghaziabad	Local	Location page, only if genuinely served	Medium
digital marketing strategy for startups	Informational / commercial	Blog guide or start-up page	Medium

how to improve website ranking on Google	Informational	Educational blog article	Medium
what is keyword research in SEO	Informational	SEO learning article	Medium
on-page SEO checklist	Informational	Downloadable checklist / blog	Medium
SEO vs Google Ads	Commercial investigation	Comparison article	Medium
social media content calendar template	Informational	Template page / blog	Medium
how much does SEO cost in India	Commercial investigation	Pricing explainer / FAQ	Medium

Interpretation

High-priority phrases are close to service enquiries and should generally be assigned to clear landing pages. Informational phrases are useful for attracting early-stage audiences and building topical relevance, but the content should naturally guide readers to a relevant service without turning every article into a sales pitch.

5. Search Intent Analysis

Keyword	Likely intent	What the searcher expects	Recommended content
SEO services	Transactional / commercial	Service details, process, proof, pricing approach, contact option	Dedicated SEO service page with deliverables and FAQs
SEO vs Google Ads	Commercial investigation	Differences, costs, speed, benefits, suitable use cases	Balanced comparison guide with decision framework
what is keyword research in SEO	Informational	Simple definition, steps, examples, tools	Beginner guide with a sample keyword table
digital marketing agency in Lucknow	Local	Nearby provider, services, trust signals, contact details	Accurate local landing page with real service-area information
website SEO audit	Transactional	What is checked, deliverables, turnaround, next steps	SEO audit page with scope and enquiry CTA
social media content calendar template	Informational	A usable planning format and examples	Template article with downloadable calendar
how much does SEO cost in India	Commercial investigation	Cost factors, package differences, realistic expectations	Transparent pricing explainer; avoid unsupported fixed promises

Intent can overlap. For example, a person searching “SEO agency for small business” may be comparing providers and be close to contacting one. Review the actual results page before finalizing the page format.

6. Keyword Clustering and Page Mapping

Topic cluster	Primary page	Supporting content ideas

Core agency	Home / agency overview	Who the agency helps; process; case studies; FAQs
SEO	SEO services	Keyword research guide; on-page checklist; technical SEO basics; SEO audit
Local SEO	Local SEO services	Google Business Profile basics; local SEO checklist; reviews and local visibility
Paid advertising	Google Ads management	SEO vs Google Ads; campaign setup guide; landing-page tips
Social media	Social media marketing	Content calendar template; platform content ideas; engagement measurement
Content marketing	Content marketing services	Content strategy guide; blog planning; content performance metrics

Recommended site structure

Home → Services → SEO Services → Local SEO / SEO Audit; Home → Services → Social Media Marketing; Home → Services → Google Ads; Blog → keyword research, SEO checklist, SEO vs Google Ads, and content planning.

Use descriptive internal links between relevant educational articles and service pages.

7. SEO Content Plan (First Month)

Publishing schedule is illustrative. Adjust it to available resources, expertise, and the audience's needs. Quality and usefulness are more important than posting every day.

Week	Content idea / working title	Target keyword	Format	Goal / CTA
1	Keyword Research in SEO: A Beginner's Guide	what is keyword research in SEO	Blog guide	Educate; link to SEO service
1	SEO Services for Small Businesses: What's Included?	SEO agency for small business	Service page	Explain deliverables; request consultation
2	SEO vs Google Ads: Which Should a Small Business Choose?	SEO vs Google Ads	Comparison article	Help evaluate options; book a discovery call
2	A Practical On-Page SEO Checklist	on-page SEO checklist	Checklist / blog	Provide practical value; download checklist
3	What Does an SEO Audit Check?	website SEO audit	Service page + article	Explain process; request an audit
3	How to Plan a Month of Social Media Content	social media content calendar template	Template article	Offer useful template; explore social services
4	Local SEO Basics for Service Businesses	local SEO services	Guide	Educate; link to local SEO page
4	How Much Does SEO Cost in India? Key Factors	how much does SEO cost in India	Pricing explainer	Set expectations; invite a tailored quote

Suggested content brief template

Primary keyword: one main search topic.
Audience: who the page is for and what they already know.
Intent: the question or task behind the search.
Promise: what the reader will learn or be able to do.
Outline: clear H1, logical H2 sections, examples, FAQs where useful.
Evidence: original experience, screenshots, expert review, credible sources, or real case studies when available.
CTA: one relevant next step, not several competing calls to action.

8. On-Page SEO Recommendations

Element	Recommendation	Example for SEO service page
Title tag	Unique, descriptive, natural; reflect the page's main topic.	SEO Services for Small Businesses | Agency Name
Meta description	Summarize value and set an accurate expectation; it may not always be used verbatim by Google.	Explore practical SEO services for small businesses, from keyword research to technical improvements. Request a consultation.
H1 heading	One clear primary page heading.	SEO Services for Small Businesses
Headings	Use descriptive H2/H3 sections that organize the page.	What's included; our process; reporting; FAQs
URL	Short, readable, stable, and relevant.	/seo-services/
Internal links	Link to related pages using meaningful anchor text.	Link "keyword research guide" to the relevant article
Images	Use relevant, optimized images with useful alt text where appropriate.	Alt text describing a genuine process screenshot
Trust signals	Use truthful credentials, reviews, case studies, and contact information.	Publish only verified client outcomes and testimonials
Mobile / speed	Test mobile usability, loading performance, and page experience.	Compress large images and check page templates

Sample page outline: "SEO Services for Small Businesses"

1. H1: SEO Services for Small Businesses
2. Short introduction: who the service is for and the problems it addresses.
3. H2: What's included in the SEO service?
4. H2: Our SEO process — discovery, keyword research, technical checks, content, measurement.
5. H2: How progress is measured — relevant impressions, clicks, enquiries, and conversions.
6. H2: What affects timelines and cost?
7. H2: Frequently asked questions.
8. Final CTA: request a consultation or website review.

9. Measurement and KPIs

KPI	What it tells you	How to use it

Search impressions	How often pages appear in search results	Identify topics gaining visibility
Organic clicks	Visits from unpaid search results	Find pages and queries earning visits
CTR	Clicks relative to impressions	Review titles/snippets when visibility is good but clicks are weak
Average position	A search performance indicator reported by Search Console	Use as a trend, not a guaranteed or universal rank
Organic enquiries	Leads attributed to organic visits where tracking works	Connect SEO activity with business value
Conversion rate	Share of relevant visits that complete a desired action	Improve page clarity, trust, and conversion paths

10. 30-Day Implementation Roadmap

Period	Actions	Deliverable
Days 1–3	Confirm target audience, service area, business priorities, and existing site pages.	Brief and seed keyword list
Days 4–7	Expand keywords; inspect search results; validate demand and competition using tools.	Validated keyword spreadsheet
Days 8–12	Group keywords by intent and map them to existing or planned pages.	Keyword-to-page map
Days 13–18	Improve key service page titles, headings, copy, internal links, and contact paths.	Optimized core pages
Days 19–24	Draft one educational article and one supporting content asset.	Two reviewed content drafts
Days 25–30	Check indexing, analytics, Search Console setup, and conversion tracking; document baseline metrics.	SEO baseline and next-month plan

11. Expected Benefits and Limitations

Potential benefits

• A clearer understanding of what prospective customers search for.
• Better alignment between search intent and the page shown in results.
• More organized website content and internal linking.
• A repeatable way to prioritize content and measure progress.
• Improved opportunity to attract relevant organic visitors over time.

Limitations and risks

• Keyword demand and competition can change by location, language, season, and tool.
• Search engines do not guarantee rankings, traffic, or leads from a keyword list.
• Search volume alone does not show whether a query will produce customers.
• Thin, duplicated, misleading, or keyword-stuffed pages can harm user experience.

• Local pages must reflect genuine service coverage and useful local information.

12. Conclusion of this project

This project applies the core steps of SEO keyword research: selecting seed terms, expanding the list, identifying search intent, clustering related topics, mapping keywords to suitable pages, and planning useful content. For a digital marketing agency, the strongest starting point is usually a set of clear service pages supported by educational articles that answer real customer questions. The next step is to validate the sample keyword list with live tools and search-result research, then use Search Console and conversion tracking to improve the strategy based on evidence.

Project learning outcomes

After completing this project, the learner should be able to explain basic SEO, categorize keyword intent, prepare a keyword-to-page map, create a simple content plan, and identify the metrics needed to monitor organic search performance.

Appendix A — Keyword Tracking Sheet Template

Keyword	Intent	Target URL	Volume (tool)	Competition / difficulty	Status / notes
digital marketing agency	Commercial	Home / agency page	To validate	To validate	Check current SERP
SEO services	Transactional	/seo-services/	To validate	To validate	Service page
what is keyword research in SEO	Informational	/blog/keyword-research-guid e/	To validate	To validate	Educational article
local SEO services	Transactional / local	/local-seo/	To validate	To validate	Confirm actual service area
SEO vs Google Ads	Commercial investigation	/blog/seo-vs-google-ads/	To validate	To validate	Comparison content

Appendix B — Final Quality Checklist

- ■ Each target keyword matches a real audience need.
- ■ Search intent has been checked against current results.
- ■ Each page has a distinct purpose and primary topic.
- ■ Titles, headings, URLs, and internal links are descriptive.
- ■ Content is original, useful, readable, and fact-checked.
- ■ Claims, testimonials, pricing, and results are accurate.
- ■ Mobile usability, indexing, and tracking have been checked.
- ■ Baseline performance is recorded before measuring improvement.

Research note

This report is a sample academic project based on the requirements in the uploaded DecodeLabs Project 2 kit. It uses a hypothetical agency scenario and illustrative keyword priorities. Add real business details and current tool data if your instructor expects evidence from a specific website.
